25

Use of IL-18 binding protein (IL-18BP), or a mutein, functional derivative, 1. fraction, circularly permuted derivative, fused protein, isoform and a salt thereof together with an IL-1 antagonist/inhibitor in the manufacture of a medicament for the treatment and/or prevention of an inflammatory disease.

The use according to claim 1, wherein the antagonist/inhibitor of IL-1 is 2. selected from caspase-1 (ICE) inhibitors, antibodies against IL-1, antibodies against any of the IL-1 receptor subunits, inhibitors of the IL-1 signaling pathway, antagonists of IL-1 which compete with IL-1 and block the IL-1 receptor, IL-1 receptor antagonist (IL-1Ra) and IL-1 binding proteins, or an isoform, mutein, fused protein, functional derivative, active fraction or circularly permutated derivative thereof.

- The use according to claim 2, wherein the IL-1 antagonist is IL-1 receptor 15 3. antagonist (IL-1Ra).
 - The use according to claim 3, wherein the IL-1Ra is Kineret. 4.
 - The use according to anyone of claims 1 to 3, wherein the IL-1 5. antagonist/inhibitor is selected from, antisense mRNAs, soluble IL-1 receptors, and IL-1R antibody.
 - The use according to anyone of claims 1 to 5, wherein the IL-18BP is 6. PEGylated.
 - The use according to anyone of claims 1 to 5, wherein the inhibitor of IL-18 is 7. a fused protein comprising all or part of an IL-18BP fused to all or part of an immunoglobulin, and wherein the fused protein binds to IL-18.
 - The use according to claim 7, wherein the fused protein comprises all or part 8. of the constant region of an immunoglobulin.
 - The use according to claim 8, wherein the immunoglobulin is of the IgG1 or 9. IgG2 isotype.
- The use according to anyone of claims 1 to 9, wherein IL-18BP and the IL-1 10. 30 antagonist/inhibitor are used simultaneously, or sequentially.

- 11. The use according to any of the preceding claims, wherein IL-18BP is used in an amount of about 0.0001 to 10 mg/kg of body weight, or about 0.01 to 5 mg/kg of body weight or about 0.1 to 3 mg/kg of body weight or about 1 to 2 mg/kg of body weight.
- The use according to any of the preceding claims, IL-18BP is used in an amount of about 0.1 to 1000 mg/kg of body weight or 1 to 100 mg/kg of body weight or about 10 to 50 mg/kg of body weight.
 - 13. The use according to anyone of the preceding claims, wherein the IL-1 antagonist/inhibitor is used in an amount selected from 0.0001 to 10 mg/kg or about 0.01 to 5 mg/kg or body weight, or about 0.01 to 5 mg/kg of body weight or about 0.1 to 3 mg/kg of body weight or about 0.5 to 2 mg/kg of body weight or about 1 mg/kg of body weight.
 - 14. The use according to claim 13, wherein the IL-1 antagonist/inhibitor is used at about 1mg/kg of body weight.
- 15. The use according to any of the preceding claims, wherein IL-18BP is used for subcutaneous administration.
 - 16. The use according to anyone of claims 1 to 14, wherein IL-18BP is used for intramuscular administration.
- 17. The use according to any of the preceding claims, wherein the IL-1 antagonist/inhibitor is used for subcutaneous administration.
 - 18. The use according to anyone of claims 1 to 16, wherein the IL-1 antagonist/inhibitor is used for intramuscular administration.
 - 19. The use according to any of the preceding claims, wherein IL-18BP used daily.
- 25 20. The use according to anyone of claims 1 to 18, wherein IL-18BP used three times per week.
 - 21. The use according to anyone of claims 1 to 18, wherein IL-18BP is used once a week.
- The use according to any of the preceding claims, wherein the IL-1 antagonist/inhibitor is used daily.

- 23. The use according to anyone of claims 1 to 21, wherein the IL-1 antagonist/inhibitor is used three times per week.
- 24. The use according to anyone of claims 1 to 21, wherein the IL-1 antagonist/inhibitor is used once a week.
- A use of an IL-1 antagonist/inhibitor or an expression vector comprising the coding sequence of IL-1 antagonist/inhibitor and IL-18BP or an expression vector comprising the coding sequence of IL-18BP in the manufacture of a medicament for treatment and/or prevention of an inflammatory disease.
 - 26. The use according to claim 25 for gene therapy.
- 27. A use of an IL-1 antagonist/inhibitor or a vector for inducing or enhancing the endogenous production of an IL-1 antagonist/inhibitor and IL-18BP or a vector for inducing or enhancing the endogenous production of IL-18BP in a cell in the manufacture of a medicament for the treatment and/or prevention of an inflammatory disease.
- 15 28. A use of an IL-1 antagonist/inhibitor or a cell that has been genetically modified to produce an IL-1 antagonist/inhibitor and IL-18BP or a cell that has been genetically modified to produce IL-18BP in the manufacture of a medicament for the treatment and/or prevention of an inflammatory disease.
 - 29. The use according to anyone of claims 1 to 28, wherein the inflammatory disease is selected from rheumatoid arthritis, allergy, asthma, systemic lupus erythematosus (SLE), IBD, septic shock, and osteoarthritis.
 - 30. The use according to claim 29, wherein the inflammatory disease is rheumatoid arthritis.
- 31. A pharmaceutical composition comprising a therapeutically effective amount of an antagonist/inhibitor of IL-1, or a mutein, functional derivative, fraction, circularly permuted derivative, fused protein, isoform and a salt thereof and a therapeutically effective amount of IL-18BP or a mutein, functional derivative, fraction, circularly permuted derivative, fused protein, isoform and a salt thereof.
- 30 32. The pharmaceutical composition according to claim 31, wherein the antagonist/inhibitor of IL-1 is IL-1Ra.

10

15

20

25

- 33. The pharmaceutical composition according to claim 32, wherein the IL-1Ra is Kineret.
- 34. A pharmaceutical composition comprising a therapeutically effective amount of an IL-1 antagonist/inhibitor or an expression vector comprising the coding sequence of IL-1 antagonist/inhibitor and IL-18BP or an expression vector comprising the coding sequence of IL-18BP.
- 35. A pharmaceutical composition comprising a therapeutically effective amount of an IL-1 antagonist/inhibitor or vector for inducing and/or enhancing the endogenous production of an IL-1 antagonist/inhibitor and IL-18BP or a vector for inducing and/or enhancing the endogenous production of IL-18BP in a cell.
- 36. A pharmaceutical composition comprising a therapeutically effective amount of an IL-1 antagonist/inhibitor or a cell that has been genetically modified to produce an IL-1 antagonist/inhibitor and IL-18BP or a cell that has been genetically modified to produce IL-18BP.
- 37. A method of treatment and/or prevention of inflammatory disease comprising administering to a host in need thereof an effective inhibiting amount of IL-18BP, or a mutein, functional derivative, fraction, circularly permuted derivative, fused protein, isoform and a salt thereof and an IL-1 antagonist/inhibitor or a mutein, functional derivative, fraction, circularly permuted derivative, fused protein, isoform and a salt thereof.
- 38. The method according to claim 37, wherein the antagonist/inhibitor of IL-1 is selected from caspase-1 (ICE) inhibitors, antibodies against IL-1, antibodies against any of the IL-1 receptor subunits, inhibitors of the IL-1 signaling pathway, antagonists of IL-1 which compete with IL-1 and block the IL-1 receptor, and IL-1 binding proteins, isoforms, muteins, fused proteins, functional derivatives, active fractions or circularly permutated derivatives thereof having essentially the same activity as an IL-1 binding protein.
- 39. The method according to claim 38, wherein IL-1 antagonist is IL-1Ra.
- 40. The method according to claim 39, wherein the IL-1Ra is Kineret.

25 \

- The method according to claims 37 or 38, wherein the antagonist/inhibitor is 41. selected from, antisense mRNAs, soluble IL-1 receptors, and IL-1R antibody.
- The method according to anyone of claims 37 to 41, wherein the IL-18BP is 42. PEGylated.
- The method according to anyone of claims 37 to 41, wherein the inhibitor of 43. IL-18 is a fused protein comprising all or part of an IL-18BP fused to all or part of an immunoglobulin, and wherein the fused protein binds to IL-18.
- The method according to claim 43, wherein the fused protein comprises all or 44. part of the constant region of an immunoglobulin.
- The method according to claim 44, wherein the immunoglobulin is of the 45. IgG1 or IgG2 isotype.
- The method according to anyone of claims 37 to 45, wherein IL-18BP and the 46. IL-1 antagonist/inhibitor are administered simultaneously, or sequentially.
- The method according to anyone of claims 37 to 46, wherein IL-18BP is 15 47. administered in an amount of about 0.0001 to 10 mg/kg of body weight, or about 0.01 to 5 mg/kg of body weight or about 0.1 to 3 mg/kg of body weight or about 1 to 2 mg/kg of body weight.
 - The method according to anyone of claims 37 to 46, wherein IL-18BP is 48. administered in an amount of about 0.1 to 1000 mg/kg of body weight or 1 to 100 mg/kg of body weight or about 10 to 50 mg/kg of body weight.
 - The method according to anyone of claims 37 to 48, wherein the IL-1 49. antagonist/inhibitor is administered in an amount selected from 0.0001 to 10 mg/kg or about 0.01 to 5 mg/kg or body weight, or about 0.01 to 5 mg/kg of body weight or about 0.1 to 3 mg/kg of body weight or about 0.5 to 2 mg/kg of body weight or about 1 mg/kg of body weight.
 - The method according to claim 49, wherein the IL-1 antagonist/inhibitor is 50. administered at about 1mg/kg of body weight.
- The method according to anyone of claims 37 to 50, wherein IL-18BP is 51. administered subcutaneously. 30

PCT/IL2004/001170

25

- 52. The method according to anyone of claims 37 to 50, wherein IL-18BP is administered intramuscularly.
- 53. The method according to anyone of claims 37 to 52, wherein the IL-1 antagonist/inhibitor is administered subcutaneously.
- 5 54. The method according to anyone of claims 37 to 52, wherein the IL-1 antagonist/inhibitor is administered intramuscularly.
 - 55. The method according to anyone of claims 37to 54, wherein IL-18BP is administered daily.
 - 56. The method according to anyone of claims 37 to 54, wherein IL-18BP is administered three times per week.
 - 57. The method according to anyone of claims 37 to 54, wherein IL-18BP is administered once a week.
 - 58. The method according to anyone of claims 37 to 57, wherein the IL-1 antagonist/inhibitor is administered daily.
- 15 59. The method according to anyone of claims 37 to 57, wherein the IL-1 antagonist/inhibitor is administered three times per week.
 - 60. The method according to anyone of claims 37 to 57, the IL-1 antagonist/inhibitor is administered once a week.
 - 61. A method of treatment and/or prevention of inflammatory disease comprising administering to a host in need thereof an effective inhibiting amount an IL-1 antagonist/inhibitor or an expression vector comprising the coding sequence of IL-1 antagonist/inhibitor and IL-18BP or an expression vector comprising the coding sequence of IL-18BP.
 - 62. The method of treatment and/or prevention according to claim 61 for gene therapy.
 - 63. A method of treatment and/or prevention of an inflammatory disease comprising administering to a host in need thereof an effective inhibiting amount of an IL-1 antagonist/inhibitor or a vector for inducing and/or enhancing the endogenous production of an IL-1 antagonist/inhibitor and of an IL-18BP or a vector for inducing and/or enhancing the endogenous production of IL-18BP in a cell.

WO 2005/063290 PCT/IL2004/001170

- 64. A method of treatment and/or prevention of an inflammatory disease comprising administering to a host in need thereof an effective inhibiting amount of IL-1 antagonist/inhibitor or a cell that has been genetically modified to produce an IL-1 antagonist/inhibitor and IL-18BP or a cell that has been genetically modified to produce IL-18BP.
- 65. The method according to anyone of claims 61 to 64, wherein the inflammatory disease is selected from rheumatoid arthritis, allergy, asthma, systemic lupus erythematosus (SLE), IBD, septic shock, and osteoarthritis.
- 66. The method according to claim 65, wherein the inflammatory disease is rheumatoid arthritis.
